REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance: The instant application discloses a method and circuit for estimating a DC offset value. A search of prior art records has failed to teach a method comprising; "during reception of a data part of the input signal, which data part follows the preamble part of the signal, using different estimation method which relies on a DC-free signal to estimate the DC offset value of the input signal" as disclosed in claim 1. Nor does the prior art disclose a method comprising; "estimating a DC offset value of the preamble portion of the input signal using a resistance and first and second diodes connected in parallel, the input signal being supplied to one terminal of the resistance, to the anode of the first diode and to the cathode of the second diode and the DC estimate being supplied from a terminal connected with another terminal of the resistance, with the cathode of the first diode and with the anode of the second diode" as disclosed in claim 2. The prior art also fails to disclose a circuit for estimating a DC- offset value comprising; "switch means operable to switch a connection to the output terminal, such that the pair of diodes is connected to the output terminal during receipt of a preamble part of an input signal, and is not connected to the output terminal during receipt of a preamble part of the input signal subsequent to the preamble part thereof" or "wherein the control unit is operable to selectively connect its input to the output terminal, such that the first and second diodes are connected to the output terminal during receipt of a preamble part of an input signal, and such that the first and second diodes are not connected to the output terminal during receipt of a preamble part of the input signal subsequent to the preamble part thereof" along with the remaining limitations of claims 4 and 5, respectively.
